Cherry's 90° Tippers simplify  
the dangerous process of  
rotating coils or rolls.

*Rotate product within  
a 90-degree radius to  
change vertical/horizontal  
orientation for shipping or  
production.*

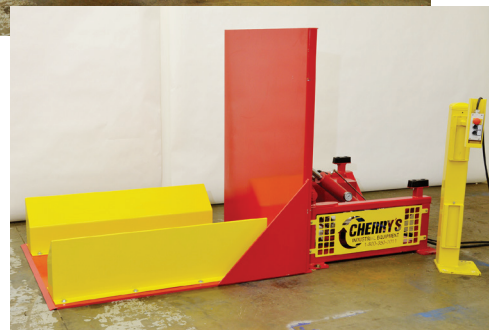

*Cut back on “manhandling”  
the product—protect your  
employees from workplace  
injuries and eliminate  
waste of cost and material.*

*Improve warehouse speed  
and efficiency!*

Unspooling coils and rolls are tough—tough on your employees, tough on machinery and tough on the product. That's why we developed our line of 90-degree coil tippers—to provide securely-anchored, highly-durable equipment that could take on that simple, yet arduous, task, saving employees from painful injuries and keeping production running smoothly. Built around four design principles our models are custom fit to your unique warehouse needs, and are constructed from the highest-quality materials for trouble-free operation. All of our coil tippers are also made right here in the USA, bringing our manufacturing and our jobs home again.

## T1 Series Ground Level to Raised Height 90-degree Tipper

The LDT-T1 90-degree Tipper is ideal for turning rolls and coils, tipping boxes or logs onto their sides for easy palletization, and changing product orientation. The T1 is loaded at ground level for convenience and unloaded at raised height by forklift or vice versa. Four floor anchors secure the unit to the ground. The LDT-T1 is easy to operate, with its hand-held two button pendant and intermittent duty power pack with power-on-demand, and is best-suited for low volume usage.

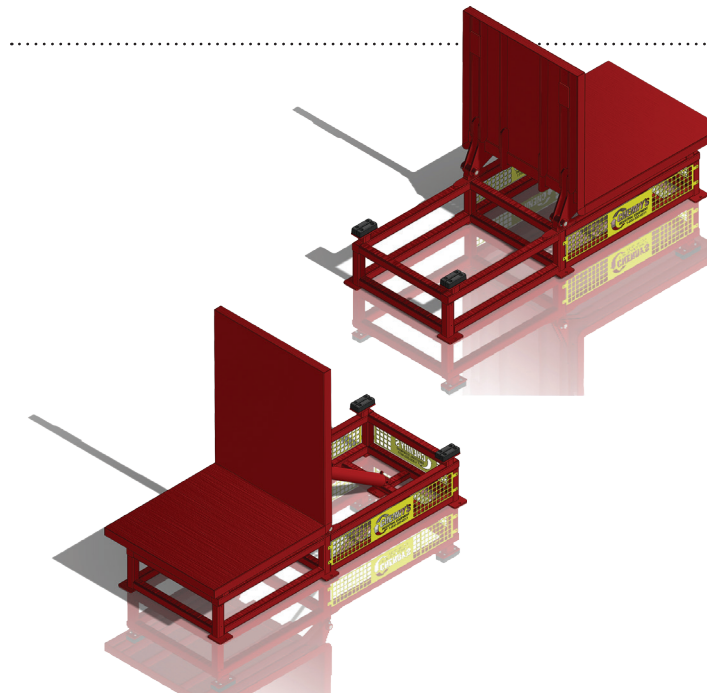

- Special order; built to specifications
- Capacities: 2,000 or 4,000 lbs.
- Intermittent duty Hydraulic power pack and shipping frame included
- Options: 110V single phase motor, continuous duty power pack, roll V-cradle

## T2 Series Low Level to Raised Height 90-degree Tipper

The LDT-T2 Pallet Tipper is also ideal for the same applications as the T1, but is both loaded and discharged at raised height (at near-ground level). Four anchors secure the machinery to the ground. Structural gussets provide additional support and allow 3-sided entry and operation. This unit is easy to operate, with its hand-held two button pendant and intermittent duty power pack with power-on-demand.

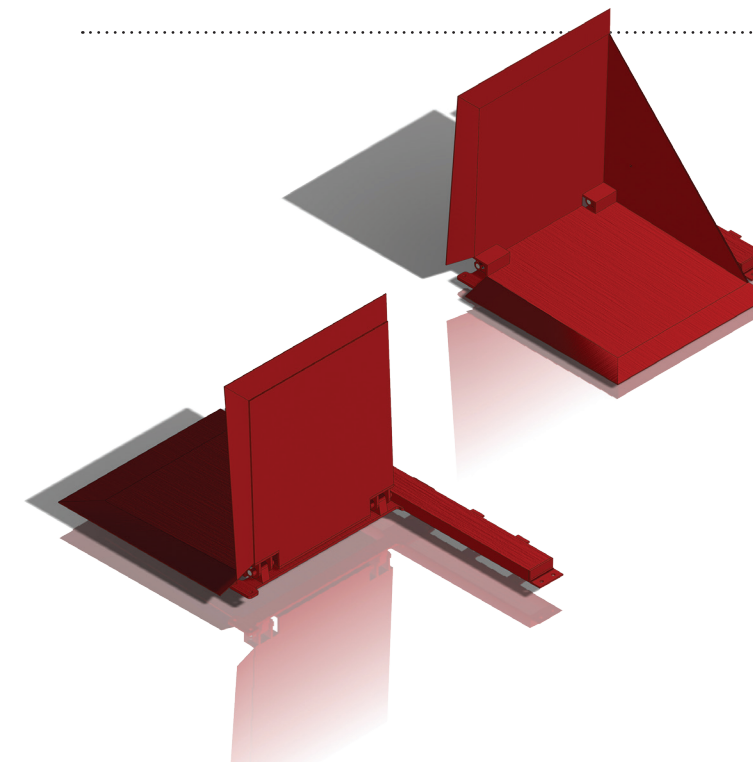

- Special order; built to specifications
- Capacities: 2,000 or 4,000 lbs.
- Intermittent duty Hydraulic power pack and shipping frame included
- Options: 110V single phase motor, continuous duty power pack, roll V-cradle

## T3 Series Raised Height 90-degree Tipper

While similar to the T1 and T2, the LDT-T3 Pallet Tipper is both loaded and unloaded at raised height, approximately 10-12" from the floor—low enough for stackers or overhead cranes to load and unload items from this unit, which is securely mounted to the ground via six anchors. This unit is easy to operate, with its hand-held two button pendant and intermittent duty power pack with power-on-demand, and is best-suited for low volume usage.

- Special order; built to specifications
- Option: 2,000 or 4,000 lbs.
- Intermittent duty Hydraulic power pack and shipping frame included
- Options: 110V single phase motor, continuous duty power pack, roll V-cradle

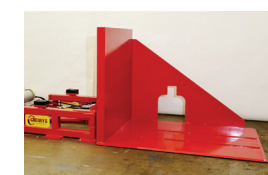

## T4 Series Ground Level 90-degree Tipper

The LDT-T4 Roll Tipper is designed for special applications that require absolute ground level loading and unloading via manual or motorized pallet trucks—no partial ramp necessary. This unit is easy to operate, with its hand-held two button pendant and intermittent duty power pack with power-on-demand, and is securely anchored to the ground at ten different points. The T4 is best-suited for low volume usage.

- Special order; built to specifications
- Option: 2,000 or 4,000 lbs.
- Intermittent duty Hydraulic power pack and shipping frame included
- Options: 110V single phase motor, continuous duty power pack, roll V-cradle

## Special Options

**CUSTOM SIZES** Customize your table dimensions easily with any of our models.

**CONTINUOUS DUTY MOTOR** For heavy-usage, we provide a continuous-duty motor.

**GUARDING** Protect your workers with our safety machine guarding.

**AUTO CONTROLS** Automatic sequencing for stand up and lay back position.

**V-CRADLE** with Pallet Notch to hold the roll or coil in place while tipping.
